

Ksatria *Bintang Samudra*

Product Engineer · Mining & Vertical SaaS, AI-augmented

I build software for mining and telecom operators and ship it end to end — domain modelling, architecture, release engineering and operations. I specify the system, drive AI tooling through implementation, and verify what ships rather than trusting what it produces.

📍 Pontianak, Indonesia 🇺🇸 Founder, Luxavero LLC ● Open to remote product & AI engineering roles

UI languages in one app

Product engineer across **mining workforce software, ISP operations, payment automation and LLM integration**. I work as an AI-augmented solo builder: I own the domain and the architecture, write the spec, orchestrate Claude Code and Cursor through implementation, and audit what actually ships — which is how I found that every earlier release build of my own app was missing the Android INTERNET permission. Background in penetration testing and enterprise Google Workspace administration.

CORE SKILLS

Mobile

Flutter Dart Riverpod Android / iOS release TestFlight Play Console Codemagic CI

Backend & Data

Laravel 12 PHP PostgreSQL Supabase Node.js FastAPI SQLite Row-level security

Frontend

Vue 3 React Next.js Astro TypeScript Tailwind CSS

AI & Automation

LLM API integration Workers AI OpenRouter Prompt engineering Multi-agent workflows Telegram bots
WhatsApp Business

Infra & Payments

Cloudflare Workers D1 / KV / R2 DNS & DKIM mail Docker QRIS Bank transfer files RADIUS / MikroTik

Security

OWASP Top 10 Penetration testing Burp Suite Rate limiting 2FA Audit trails

EXPERIENCE

● Founder & Sole Developer · CoalTrack (attendance & payroll for coal mining) Jul 2026 – Present · Remote

- ▶ Built the product end to end across **236 commits**: a Flutter Android/iOS client, a Laravel 12 + PostgreSQL 16 API, Filament and Vue 3 admin surfaces, and a Cloudflare Worker mail relay.
- ▶ Implemented Indonesian statutory payroll to cited regulation — **PPh21 TER (PMK 168/2023), BPJS and Kepmenaker 102/2004 overtime** — written twice on purpose (PHP service and Dart mirror) so server and handset produce identical figures, cross-checked by mirrored tests.
- ▶ Enforced an **append-only audit trail in the database**: PostgreSQL triggers reject UPDATE and DELETE on attendance events and approvals.
- ▶ Designed the attendance decision engine around server-authoritative time and mock-location detection, so infrastructure failures flag for human review instead of rejecting a worker.
- ▶ Ran the release line solo: Codemagic CI gating **400+ automated tests** before signed builds, Apple TestFlight and Google Play closed testing, a 7-language UI — and found, by auditing the signed bundle, that every earlier build lacked the Android INTERNET permission.

Flutter Laravel 12 PostgreSQL 16 Codemagic Cloudflare

● Systems Developer · Rimba Raya (internet service provider) Mar 2026 – Present · Remote

- ▶ Built and operate **five internal systems** for a live ISP: an operations portal, a barcode inventory system, a payslip generator, an employee data-intake form and a public showcase.
- ▶ Operations portal in Vue 3 + Supabase/PostgreSQL with Leaflet mapping; applied **46 dated SQL migrations** to production covering row-level security, a universal audit table and role-and-region access.
- ▶ Integrated RADIUS/MikroTik provisioning, QRIS payment collection and WhatsApp Business notifications for live subscriber billing.
- ▶ Root-caused a Supabase slowdown to missing indexes and per-row policy evaluation and fixed it with six indexes and a policy rewrite; added an external watchdog after tracing a VPS outage to the provider.

Vue 3 Supabase Next.js 14 RADIUS QRIS

- Founder · Luxavero LLC (Wyoming, USA)

Aug 2026 – Present · Remote

▶ Formed a US single-member LLC as the home for my products and client work.

▶ Shipped and operate **Lavelle** (lavelle.my.id), a digital wedding-invitation platform with a staff portal, Supabase row-level security and one-click publishing to per-couple subdomains, and **Venmail** (venmail.my.id), a privacy-first temporary inbox with real-time delivery and a developer API.

●

IT Systems & Google Workspace Administrator · Kalimantan Tambang Mandiri (mining)

Sep 2024 – Mar 2026 · Remote

▶ Administered the multi-domain **Google Workspace**: identity, access control, mail routing and storage.

▶ Designed scripted backup and disaster-recovery routines and built internal automation for provisioning, group management and audit reporting.

Apps Script

Automation

●

Freelance Penetration Tester · Upwork (international clients)

Jul 2023 – Jan 2024 · Remote

▶ Black- and gray-box assessments of web applications — injection, broken authentication, access-control bypass and business-logic flaws — with OWASP-aligned remediation reports.

Reporting

EARLIER

Social Media Data Analyst — Upwork. Cross-platform analytics (Instagram, TikTok, Twitter) for international clients. May 2020 – Mar 2022

SELECTED PROJECTS

Vensix — OpenAI-compatible AI gateway: one key routes to Claude, GPT, Gemini, DeepSeek and Kimi with live cost-based metering, QRIS top-ups and automated hosting provisioning. [vensix.biz.id](#)

ksatriabintangsamudra.com — Astro on Cloudflare Workers with a Workers AI chat assistant and an “Explain it” endpoint that returns sanitised Mermaid diagrams. 2026

Kiloan — subscription Android point-of-sale for laundry businesses (Flutter). 2026

Makmur Motor — showroom and inventory CMS for a Denpasar dealership on Cloudflare Workers, D1 and KV. [makmurmotor.biz.id](#)

DevSec Toolbox — 34 developer and security tools that run entirely in the browser. Live

EDUCATION

STIE Anindya Guna Semarang — Bachelor of Management (S.M.), in progress · expected Nov–Dec 2027

SMAN 1 Rengat Barat, Riau — High School Diploma, Science Track · 2017 – 2020

CERTIFICATIONS & COURSES

🎓 **Google AI Essentials** — Google via Coursera, Jul 2024 · verify

✓ ISC2 Certified in Cybersecurity — course pre-assessment (2024)

✓ Ethical Hacking · Expert Linux · Python Programming — MindLuster course completions (2024)

LANGUAGES

Indonesian — native

English — professional working proficiency

“Spec first. AI accelerates. The engineering stays mine.”
